海洋不友善防曬

行動代號：

暢
油
海
底

根據可靠消息，尚有多名同犯在逃！如果你現正使用類似產品，我們在此呼籲你自首，並改過。

暢「油」海底

你知道防曬產品有機會是殺死珊瑚的兇手嗎？

原來有些防曬產品含有對珊瑚有害的化學成分，除了有機會殺死珊瑚外，更可能引致生態失衡。即使經過污水處理廠，亦未能完全過濾掉對的珊瑚有害的化學物質。『暢「油」海底』計劃主要以海洋保育為主，旨在讓市民明白他們日常生活中所使用的防曬產品對海洋生態造成的威脅。計劃首先會通過網上問卷調查，了解不同年齡層及職業組別對有關議題關注的程度，再對及後的活動作調整；此外，我們亦計劃在較多水上活動舉辦的地方擺設展板，與市民作遊戲互動，積極爭取不同機構的支持；最後，我們更會推出工作坊，教大眾如何制作天然、對環境無害的防曬用品。希望籍著此計劃，改變他們的生活習慣，如轉用對環境無污染的產品，並提升大眾的保育意識。

Do you know that the sunscreen used in our everyday life may be the killer of coral reef?

Some sunscreen products contain harmful ingredients to coral reef which is not only a potential coral reef killer, but may even cause severe damage to marine ecosystem. Even being processed by water treatment plant, those harmful substances may not be completely filtered and will still end up in the oceans eventually. Our project aims to promote the importance of marine conservation to Hong Kong citizens. We plan to conduct an online survey to understand the general public's views on the issues, which provide insight for us to design the content. We will then educate public by displaying exhibition panels and interacting with public through games in popular water sports sites. It is also important to obtain support from the relevant organizations. In addition, we will organize workshops to teach participants how to produce handmade environmental friendly sunscreen product.. Through this project, we hope to raise the awareness on environmental protection among the general public, so that they would also make change in their daily habit e.g. switching to use environmental friendly products. Together we can make the world in little bit better!
